

RAKOTOMAHARO TAHINA HAJANIRINA

DevOps Engineer, Certified Kubernetes Administrator | 10 years of experience

[Portfolio](#) | [Github](#) | rakotomaharo.tahina@gmail.com | +261 32 75 691 07

Professional Summary

Highly experienced DevOps and Systems Engineer with over 10 years of experience in IT operations, including 3+ years specializing in DevOps and cloud infrastructure. Proven track record of designing, automating, and operating highly available, cloud-native platforms, driving reliability, scalability, and delivery efficiency through Kubernetes, Infrastructure as Code, and modern CI/CD practices.

Certifications:

CKA: Certified Kubernetes Administrator - CNCF/LF (Sep 2025) - Credential ID: LF-gp8t1corh5 - [Verify](#)

Tools and technologies:

Cloud platform: AWS

Container Orchestration: Kubernetes

CI/CD: Jenkins, ArgoCD

IaC: Terraform

Configuration Management: Ansible

Packaging & Templating: Helm

Networking: Nginx, Apache, GatewayAPI

Scripting & programming: Python, Bash

Monitoring & Observability: Prometheus, Grafana

Virtualization: VMware

Developer Platform: Backstage

OS: Linux, Windows Server

Collaboration: Asana, Jira

Education

2015: Master II - Computer Science - École Supérieure Polytechnique d'Antananarivo

2015: DEA - Applied Physics - University of Antananarivo

Languages

French: Excellent | English: Very Good

Professional Experience

DevOps Lead | UGD (GovTech) *May 2023 - June 2026* | *Antananarivo, Madagascar*

- Implemented and maintained a highly available on-premise Kubernetes cluster, including automatic ETCD backups with Restic, Gateway API networking, certificate management, and operators such as Longhorn for distributed storage and Crunchy PGO for managed database services.
- Engineered and deployed a GitOps framework using ArgoCD, leveraging App-of-Apps architecture, ApplicationSets, and Helm charts to streamline continuous delivery and application lifecycle management.

DevOps Lead | UGD (GovTech) *continued*

- Designed, implemented, and maintained CI/CD pipelines using Jenkins, incorporating shared libraries, automated security scanning, secure secrets handling, organizational folders, and multi-branch pipelines for multi-environment deployments.
- Set up an Internal Developer Platform (IDP) using Backstage to provide a golden path for deploying applications to Kubernetes. The workflow scaffolds a service with custom Helm values, pushes it to GitLab, uses auto-generated Jenkins jobs for CI, and synchronizes deployments through ArgoCD.
- Automated server tasks using Ansible, covering permission management, software installation and updates, and dynamic inventory refreshes on AWS and VMware, significantly reducing manual intervention.
- Led a cross-domain team comprising DevOps, DBAs, and software engineers, promoting effective communication and collaborative trust.

DevOps Engineer | Ezway (Technology Consulting) 2022 - 2023 | *Antananarivo, Madagascar*

- Implemented and administered Terraform modules to provision and manage AWS infrastructure for application hosting.
- Enhanced and maintained CI/CD pipelines for multi-stack applications, including JavaScript and PHP frameworks.
- Authored Bash scripts for operational automation tasks, including scheduled backup processes.
- Engineered Python backend services leveraging FastAPI, SQLAlchemy, Redis, and PostgreSQL.
- Orchestrated containerized application deployments and lifecycle management using Docker and Docker-Compose.
- Configured and maintained Apache and Nginx reverse proxies and web servers for availability and performance.
- Collaborated with distributed remote teams, using Jira for task tracking and Zoom for meetings.

Network Administrator | BMOI (Banking) 2018 - 2022 | *Antananarivo, Madagascar*

- Administered and optimized core banking network infrastructure, including Cisco router configuration and firewall policy implementation.
- Oversaw enterprise backup and disaster recovery operations with Veeam, conducting scheduled restoration tests to validate backup integrity and recovery readiness.
- Monitored and maintained the ATM network through dashboards and proactive alerts, ensuring high availability and rapid incident response.
- Generated monthly reports on ATM performance, availability, incidents, and post-incident root cause analyses to support operational improvements.

System Engineer | Orange (Telecommunications) 2015 - 2018 | *Antananarivo, Madagascar*

- Managed 200+ VMware virtual machines running Linux and Windows Server operating systems.
- Managed enterprise Active Directory, implemented and maintained Group Policy Objects (GPO), and handled Exchange server operations.
- Administered Linux systems, troubleshoot issues, and managed disk storage with LVM.
- Participated in the incident response team rotation during weekends and night shifts.

Projects

IDP Platform - Kubernetes GitOps Internal Developer Platform | 2026 | [GitHub](#)

Stack: Backstage, Kubernetes, Argo CD, Helm, Gitea, GitHub Actions, Crunchy PGO

- Designed a Kubernetes-native self-service platform that turns a Backstage form into a running, customizable application through an automated GitOps golden path.
